

SPECTRADOME PRIVAGLASS™

OOO

SPECTRADOME PRIVAGLASS is a revolutionary LCD system (compatible with installation on virtually every glass surface) to be used for an effective personal privacy protection: our system can turn almost every ordinary glass or window into a hi-tech LCD glass.

By using the very same technology of the world-famous LCD glass (where liquid crystals are integrated within the glass itself), the SPECTRADOME PRIVAGLASS system is installed onto the inner glass surface thus obtaining the very same results at a much lower price.

Today, with SPECTRADOME PRIVAGLASS, even private individuals with smaller budgets than those of large corporations, can afford one of the most advanced and innovative hi-tech systems available on the market for an effective protection of their own privacy: the SPECTRADOME PRIVAGLASS electronically switchable liquid crystal glass.

Our LCD glass and windows do offer multiple advantages as follows:

- reduced cost, if compared to an ordinary LCD glass or window;
- environmental-friendly + energy-saving effect. Our system has insulation and reflection effect on infrared light, which makes your room warmer in winter and cooler in summertime;
- extended compatibility: system is compatible with almost every window or glass (the glass must be perfectly smooth, not frosted or treated);
- fully customizable in terms of both installation and dimensions (small dimensions are possible);
- high transparency;
- extremely easy to use when installed properly.

The PRIVAGLASS electronically switchable smart glass comes available in three different panel sizes as a standard:

1. 3m x 1,2m (largest available)
2. 2,7m x 1,2m
3. 2,44m x 1,2m

For all the above standard sizes, LCD glass price is EUR 1.500,00 per square meter.

We are able to provide our customers with fully customized panel dimensions, ranging from very small to very large surfaces, by joining many standard-dimensioned panels together. Please note that additional cut and customization of the standard measures available will result in a proportionally increased final cost.

System installation fees are never included and must be added to system cost.

In the below picture, one PRIVAGLASS small window is visible in its ON (polarized) status: as you can see, the LCD glass in its ON condition is totally transparent and see-through vision is possible (our company logo shows in the background).

The second picture below, shows exactly the very same PRIVAGLASS LCD window above when in its OFF condition: as you can easily notice, the glass surface is totally opaque owing to the liquid crystals perpendicular position, reflecting visible light instead of allowing it to pass through the glass. As a result, it is impossible to see through the LCD glass (our company logo is not visible any more and the light coming from above is reflected by the LCD panel).

In the following pictures, some of the main possible applications for our LCD glass, LCD windows and smar glass are shown: installation is feasible almost everywhere at home, office, public venues, hotels as well as large boats and yachts.
Some installation examples with system turned on and off are following.

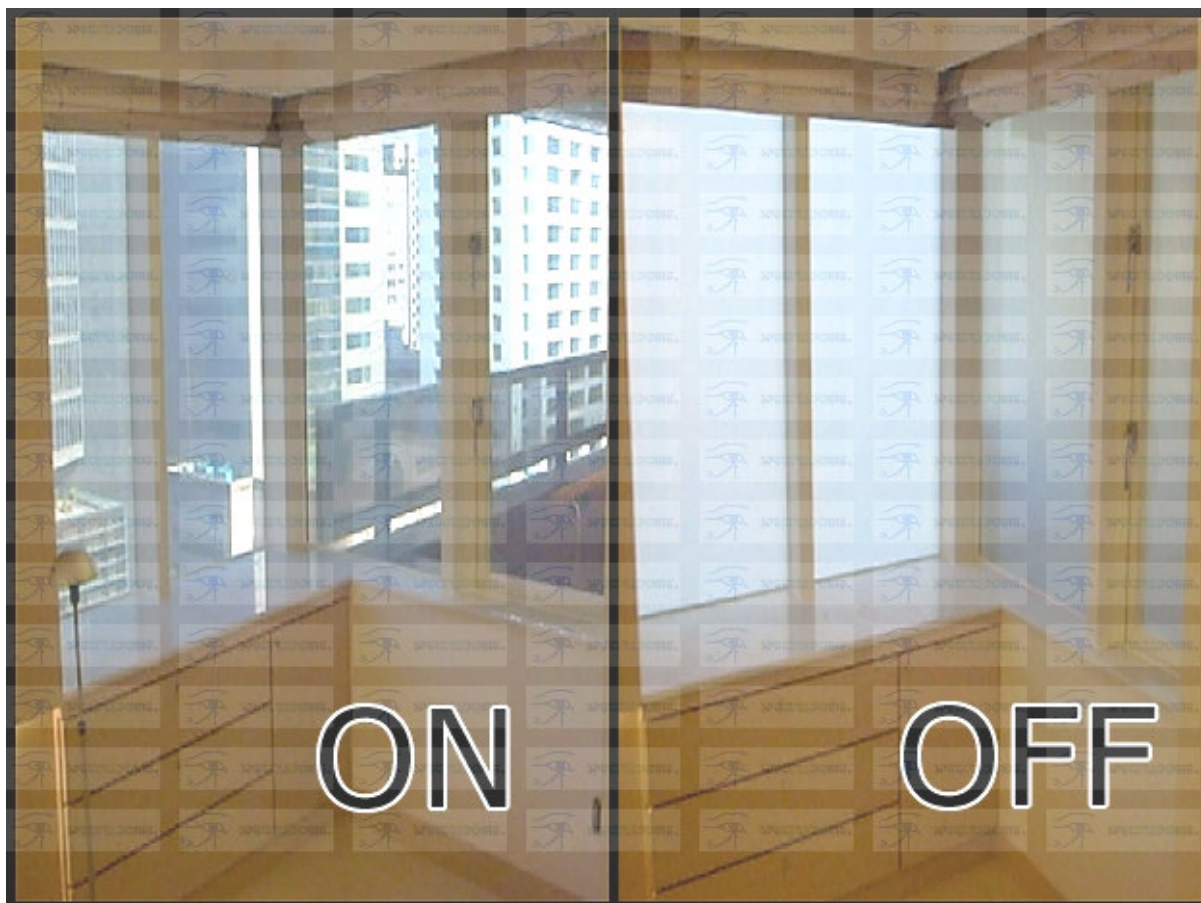

Living room door at home:

Dressing room of a "haute-couture" store----->

Hotel suite windows:

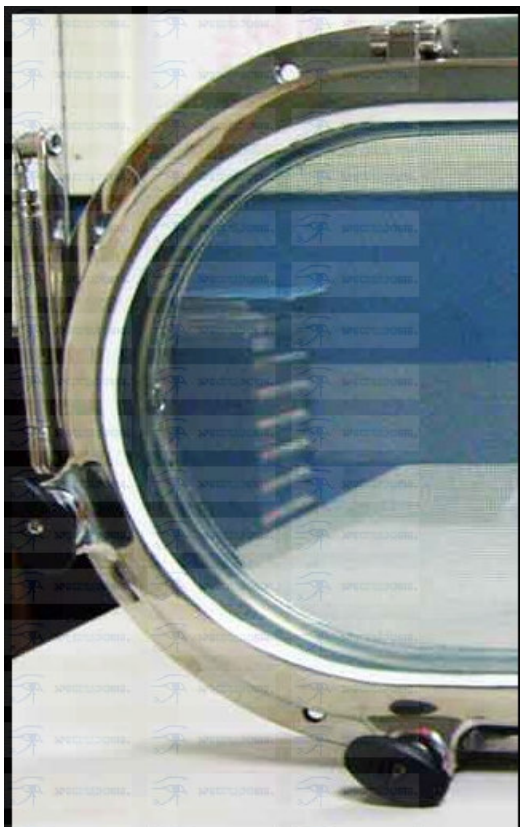

LCD video projection onto a PRIVAGLASS LCD panel ----->

As clearly shown in the aside picture, PRIVAGLASS LCD panels can turn into large home-cinema screens as fast and easy as abc. Being the LCD panel surface completely opaque, video projection quality is outstanding.

LCD glass panels can also be effectively used for hi-tech marketing and multi-media advertising operations, as they can be easily customized in size according to customer's request and specifications.

The aside picture show the PRIVAGLASS LCD window system installed onto the inner side of a boat window. In these pictures, you can see our LCD glass both in its ON (above) and OFF (below) status.

Boat and yacht installation of the PRIVAGLASS liquid crystal privacy window is not only feasible, but also very practical, useful and aesthetically unparalleled, especially if your boat is either brand new or expensive.

We are in a position to provide our customers with fully customized panels, to suit virtually every installation needs on boat or yacht.

Yacht window shown in the aside picture is from a 12mt/36ft yacht.
